COMPUTING SKILLS, TOOLS, & STRENGTHS

- *Typescript, JavaScript, HTML, CSS, JSS, SASS*
- *React, Redux.js, Redux-Saga, TanStack-Query*
- Frontend development with a focus on accessibility, responsiveness, and performance at scale
- Complex and customized data visualization using tools like *D3, Material UI X, and Chart.js*
- Product design, requirements gathering, and priority-focused decision making
- *Node.js, Python, C#, Java*
- RESTful API architecture and microservice design
- Relational and non-relational database management and access with *SQL, MongoDB, GraphQL*
- Automated testing design principles and experience in *Jest, Vitest, React Testing Library, Enzyme, Cypress*
- System administration and CI/CD automation using cloud services and on-premise servers

EXPERIENCE

Senior Frontend Software Engineer - U.S. Bank, Boston, MA

July 2023 - Present

- Writes efficient and maintainable systems using *Typescript* and *React*, which integrate business expense management software with established financial systems, with high attention to security and compliance needs
- Leads UX development for new Spend Management analytics platform, guiding feature from inception to launch over the course of eight months, meeting original project deadlines, delivering new insights and data visualizations to customers, and meaningfully increasing business subscription value
- Leads domain-specific overhaul of application user interface, developing and enacting an incremental release plan for the implementation of a new design system and the maintenance and deprecation of existing code
- Accurately estimates and documents effort needed for project work and delegates tasks to available engineering resources, providing technical direction, mentorship, and code review to team members
- Guides architectural direction for frontend codebases by leading design discussions, developing and presenting proofs of concept for far-reaching changes, and producing detailed technical documentation
- Implements complex pixel-perfect features from *Figma* prototypes and works closely with product and design teams to identify undefined requirements and give product-informed feedback on engineering needs
- Serves as a subject-matter expert on key feature areas and delivers in-depth knowledge transfer sessions on internal application architecture, cross-product integrations, and third-party tools and libraries

Freelance Engineer and Artist - Fort Collins, CO

November 2022 - July 2023

- Constructed and developed for an enclosed Raspberry Pi system and peripherals to be used in a local escape room to synchronize room behavior with audio and environmental effects
- Illustrated and fabricated puzzles, jewelry, and other trinkets using a laser cutter and vector graphics software

Senior Frontend Software Engineer - Kovacs Systems, Denver, CO

April 2020 - November 2022

- Led UX design and development for a *Node.js* and *React* based CRM (Ringy) in a fast-paced startup environment, improving results for thousands of sales agents through automated marketing tactics
- Migrated *React* across three major versions, maintaining and refactoring legacy class components
- Piloted migration effort to move state management and side-effect logic from *Redux-Saga* to *React-Query*
- Recorded, evaluated, and responded to analytics on application use patterns as well as first-hand accounts from clients and support staff, constantly enhancing user experience based on real world data
- Collaborated with CTO and lead engineers on major application design decisions to determine code standards, plan features and refactoring efforts, and map out new microservice interactions
- Designed and implemented user experience for new and innovative products and features; independently produced client side of a video conferencing application (Scopey) for integration with primary product

PROJECTS

- *React, Node.js, Azure SQL*: Anesthesia dosing calculator for use in veterinary medicine, with ability to store drug protocols and patient data to user account
- *React, Java, Websockets*: Browser-based multiplayer board games and party games with custom logic engines and real-time state synchronization
- *React*: Developer tool for credential storage, MFA token retrieval, and form autofill to streamline account switching in development and test environments
- *React Native, Node.js, MongoDB*: Mobile app for formal mentorship coordination with user enrollment, role-based communication, and scheduling features
